Hello Ron,  
Please save this to SEMS for Smokey Mountain Smelters.  
Thank you,  
Scott

Scott,

I'm sorry for the delay. That these details were not already provided to you is not intentional, but simply slipped through the cracks.

As of 5 February, JM WALLER is completed with the field work described by the most recent FSP Addendum, including soil sampling, well installation and development, new wellhead survey, a complete round of well gauging and sampling, and IDW sampling. Waste disposal is currently being arranged. I have also procured a replacement manhole for the damaged well MW03B, and intend to replace the surface completion at that well during IDW removal, or another time when the schedule allows.

I understand we have received some preliminary sampling data, but not the entire volume.

I will return from the field (on another project) after the week of 15 February, and plan to begin review of the data collected at that time. Of course, if you require any information or have any questions before then, Arnie and I are available at your convenience.

Thanks,

Matt

Subject: Status of Efforts on Smokey Mountain Smelters

Hello Matt,

Hope that you are doing well. Where are we in terms of efforts at Smokey Mountain Smelters?

Thank you,

Scott
